PROFILE

Product designer who designs and builds. I work end to end: user research, flows and design systems in Figma, then shipping the product with React, Supabase or Shopify and measuring it with real users. Before design I spent eight years in the automotive industry and led a store team in Toronto, which taught me to stay close to the people who use the product and to work within real constraints.

EXPERIENCE

Product Designer · Freelance, remote — Apr 2026 – Present

NoLimits Coaching · coaching app and coach dashboard (Apr 2026 – present)

- Designed and built an installable mobile app for athletes and a web dashboard for coaches (React, TypeScript, Supabase, Cloudflare).
- Took the product from research and a Figma design system to a live test with 2 coaches and 5 athletes in November 2026.
- Built usability measurement into the app: an in-app questionnaire with the System Usability Scale at mid-test and end of test.

MIRA Project · Made in Italy fashion label (Sep 2026 – present)

- Built the brand's design system from its Instagram identity: colour tokens, type, spacing and core components, checked against WCAG AA.
- Compared seven platforms and built a showcase-first Shopify site, with cart and checkout ready behind a single switch.
- Designed a next-drop page with a countdown and an email waitlist, plus a cookie banner with equal-weight choices.

Manager · Truck and Car S.r.l., Motteggiana, Italy — 2019 – Present

- Run daily operations, coordinating customers, suppliers and technicians; negotiate with suppliers and plan schedules.
- Introduced digital tools to improve internal processes. Promoted from bodyshop repairer (2017 – 2018).

Store Supervisor · Forno Cultura, Toronto, Canada — Apr 2025 – Nov 2025

- Promoted from food service after five months; coordinated daily store operations, the shift team, inventory and supplier orders.
- Served a high-volume, multilingual customer base, working with the store manager to improve the customer experience.

SELECTED PROJECTS

Fenwick · B2B expense approval tool (concept) — Aug 2026

- Approval queue designed for volume, budget context on every request and a request-info loop; built as a working prototype with Claude Code.

MyLocalGuide · travel app for local experiences (concept) — Jun – Jul 2026

- Surveyed 26 travellers before scoping the MVP (58% don't trust that today's "local" experiences are genuine); designed onboarding, discovery, booking and host chat, plus a UI kit.

SKILLS AND TOOLS

Product and UX	User research and surveys, usability testing (SUS), user flows, wireframing, prototyping, design systems, accessibility (WCAG)
Tools	Figma, FigJam, Shopify (Liquid), React, TypeScript, Supabase, Claude Code, Notion
